L

From

K. CHENGALARAYA REDDY, ESQR., B.A., B.L.,
President, District Board, Kolar.

To

M. VENKATANARANAPPA, Esq., B.A.,
Secretary to the Government of Mysore,
Development Department, BANGALORE.

Thro

(THE DEPUTY COMMISSIONER, KOLAR DISTRICT.)

Sir,

In forwarding herewith a note from the Sericultural Superintendent Mysore, re: the starting of an additional Government Grainage at -- Thalagavara in Chintamani Taluk for increasing the supply of cross breed layings required by the Sericulturists in the area, I have the honour to state that the note clearly indicates the requirements and that in addition to the building at Thalagawara the cost of initial equipment would amount to Rs.3850/-. The Sericultural Superintendent Mysore, requested me in his D.O. letter No.2155 dated 8-12-34 to place the matter before the Board and obtain its sanction for contributing the above amount. The Superintendent of Sericulture, Mysore was kind enough to be present on the date of meeting and explain to the District Board Members the importance of his scheme. In view of the fact that there has been a cry by the Sericulturists for a larger supply of cross breed layings and the rearing of these worms would bring them some return in these days of economic depression, the District Board in their meeting held on 22-12-34 have resolved that the T.B. at Thalagawara may be handed over to the Sericultural -- Department and Rs.2500/- only granted towards initial equipment. A copy of District Board Resolution No.58 is enclosed. The T.B. at Thalagawara has been transferred to the care of the Village Panchayat in G.O.No.L.6890-2 L.B.112-31-2 dated 7/11th April 1932.

In the circumstances, I request that sanction of Government

Government may kindly be obtained to the above resolution of the Board.

Draft covering order

It is understood that [illegible] on the subject in the [illegible]

[illegible]

The [illegible] has sent up proposals to obtain a passage at Talavara which [illegible] into account the transfer of the T B and the grant of Rs 2500 from the Dt Bd. The recommendation of the Div. is under him & is likely to be [illegible]

4207
21.1.35

The President does not say from what source the sum of Rs 2500 is to be met.

Under the G O of 11-6-32 the TB in question has been transferred to the Village Panchayat. It is not clear if the building is made use of by the Village Panchayat or whether they can spare it for the purpose in view.

Should the above information will be called for

GEN. & REV. SECTT.

The urgent need to start a Grainage at Talagawar in Chintamani Taluk to increase the supply of Cross Breed Layings.

The area under mulberry in Kolar District is about 8,000 acres as against about 4,000 acres in 1931-32. Silk worm rearing is being practised in Kolar, Chintamani, Sidlaghatta and Chikkaballapur Taluks and to a very small extent in Malur Taluk.

The sericulturists have suffered and are suffering considerably due to the continued depression in the silk trade and the abnormal competition from cheap imported raw silk. The Government of India have afforded some amount of protection to the indigenous silk industry for a period of five years. The extent of protection afforded is inadequate and the period for which protection is afforded is too short taking into consideration the magnitude of the work to be done to reorganise the industry which is practised by illiterate, conservative and poor agriculturists in the interior villages.

To withstand competition in course of time with imported silk the cost of production of Mysore silk has to be reduced without affecting the income of the sericulturists. The measures to be adopted to achieve this object are the following:-

1. Improvement in the cultivation of mulberry so that the yield of leaves per acre is increased without increasing the cost of cultivation.

2. Improvement in the rearing of worms so that the Sericulturists harvest all the crops successfully get more yield of cocoons per unit, improving the quality of cocoons so that they contain more silk.

3. Improvement in the reeling of silk so that the price of Mysore silk approximates as much as possible the cost of imported silks of similar quality.

All the above items of work are being attended to by this Department of Sericulture to the extent of facilities available.

To improve rearing, the seed supply has to be improved. The problem of seed supply is the basis of all improvement

in the rearing of worms and protection of disease. In addition to the adequate supply of disease free layings, timely technical assistance has to be rendered to the sericulturists by trained staff so that they might get the maximum benefit. It is a matter of serious knowledge that the sericulturist loses 10 per cent of the crop due to bad seed. This could be entirely prevented by using disease free seed, thus reducing cost of production of cocoons and ultimately cost of silk. As it has been found that cross breed seed got from crossing Mysore female moth with Japanese or Chinese male moth gives about 30 per cent better harvests, the cocoons contain more silk and the worms produce cocoons in a much shorter period than Mysore seed.

The supply of disease free layings in the United States is being made by the Silk Department through its Aided Grainages and Sericultural Co-operative Societies. The quantity of layings supplied has been increased from 7½ lakhs of layings in 1931-32 to 18 lakhs in 1933-34. This supply is not quite adequate to meet the requirements of about 400 layings per year for the rearing. The supply of cocoons and by-products (pupae) from layings has been increased five times during the last three years (1930-31 to 1933-34). During the current year about 2 lakhs of layings have been supplied during the first four months of the year as against 8 lakhs of seed layings supplied during the same period last year. There has been a demand for a larger supply of cross breed layings and the Sericultural Department has been unable to meet the demand in spite of straining all its resources. Steps have been taken to increase the output of cross breed layings in Government and in some selected aided Grainages. But it is necessary that local bodies such as Grainages/ the District Boards also interest themselves in increasing the supply of cross breed layings required by the sericulturists by augmenting the resources of the Department of

Sericulture.

As already stated the area under mulberry in the Kolar District is about 3,000 areas and the total seed requirement per year would be about 30 lakhs of layings. The layings required by the Sericulturists in this District are supplied by the two Government grainages at Kolar and Sidlaghatta and by the aided Grainage situated in Sidlaghatta and Chikkaballapur Taluks. The Government Grainage at Kolar and Sidlaghatta prepared and supplied about 3¼ lakhs of layings mostly Mysore during 1931-32 while ~~while~~ the aided grainages in Kolar District supplied about 10 lakhs of disease free layings during the same year. During 1933-34 the Government Grainages at Kolar and Sidlaghatta prepared about five lakhs of layings of which 4 lakhs were hybrid while the aided grainages supplied 10 lakhs of Mysore layings. It is seen that only about 16 lakhs of layings are being supplied as against a ~~g~~total demand for about 300 lakhs of layings ~~ka~~ as the Mysore Grainage supplies some quantity of layings to Sidlaghatta area. With the object of increasing the production and supply of cross breed layings from the Government Grainages at Sidlaghatta and Kolar a new building costing about 3,000/- was got constructed last year at Sidlaghatta and a house has been taken on rent in Kolar. With these added facilities the Government Grainages have already prepared about 3 lakhs of layings during 4 months this year mostly cross breeds as against 68,000 cross breed layings prepared during the same period last year. It is expected that Government will sanction early funds for extending the building at Kolar and for employing extra staff to increase the production of layings.

In spite of all the efforts made so far, the demand for cross breed layings from the sericulturists of the area cannot ~~be~~ met, In these days of depression, the sericulturists are very keen on getting an adequate supply of cross breed layings. To increase the supply it is proposed to give facilities to some aided grainages to prepare cross breed layings

It would facilitate matters if the Kolar District Board

(THE DEPUTY COMMISSIONER, KOLAR DISTRICT.)

Sir,,

With reference to your letter No.L.5227 L.B.74-34-2 dated 2-2-35 calling for certain information re: the transfer of the T.B . at Thalagavara in Chintamani Taluk for a grainage being opened by the Sericultural department, I have the honour to state as follows:--'

The building was not handed over to the care of the Village Panchayat as per G.O.No.L.6890-2 L.B. 112-31-2 dated the 7th April 1932 for the following reason;-- the Village Panchayat wanted that the building should be got repaired before the same is handed over to them for management and hence the difficulty. So an estimate for Rs.340/- towards the repairs of the building was called for and placed before the District Board in its meeting held on 8th Decr:1934. The Board sanctioned the estimate and resolved that the building may be maintained by the Board. As the matter was under correspondence, the sanction of Government could not be obtained in time to the above resolution of the Board. In the meanwhile, there was a requisitic Sericultural Department for the T.B. for the purpose of opening a grainage there the Board resolved in their meeting held on the 22nd Decr:1934 that the building may be handed over to the Sericultural Department as it was not being made use of by the
